The Burj Khalifa, at 2,723 feet, is currently the tallest structure in the world. Construction began in September of 2004 and the doors were opened in January of 2010. The structure is home to 30,000 residences, 9 hotels, 19 residential towers, Dubai Mall, acres of parkland, and a 30-acre lake.

Hager Companies provided full mortise hinges and concealed leaf stainless steel continuous hinges—both American-made and backed by a lifetime warranty. Hager also provided floor stops, flush bolts, and threshold and weatherstripping products for this amazing structure.

Hager hinges have graced door openings for more than 165 years. Our hinges are found throughout the United States and around the globe. We’re confident they will support the doors of Burj Khalifa for the life of the building.
