Installation Instructions

**PULL SIDE APPLICATION (RIGHT HAND SHOWN) 120° DOOR PREP**

**Installation Sequence:**

1. Use door prep above to locate holes on door and frame. Drill 1/8" pilot holes for the self tapping screws.
2. Fasten closer body to door with power adjustment port away from hinge.
3. Position slide track to frame face orientated with countersink visible open side facing down and with hold open stop end toward hinge edge of door. Slide end caps on, insert screw through end caps and fasten to the frame.
4. Place slide arm on pinion shaft of closer so arm is positioned at a 45 degree angle out from door face.
5. Secure arm with arm washer and arm screw.
6. To properly preload closer, push arm towards door and secure other end of slide arm to track by screwing it to the slide insert. Open door to required opening angle. Then slide stop only/hold open stop up against slide insert and tighten down the stop only/hold open stop via set screw.
7. Determine door width, adjust spring power of closer by referencing closer adjustments on page 4.

**Parts Diagram:**

- **Universal End Cap**
- **Slide Insert**
- **Hold Open Stop**
- **Stop Only**
- **Mounting Screw**
- **Set Screw**
- **Sliding Arm Insert Screw**
- **Sliding Arm**
- **Sliding Track**

**Dimensions:**

- **Top of Door**
  - Centerline of Hinge: 5 3/16" [132]
  - Width: 19 7/8" [505]
  - Height: 1" [25]

- **Front View**
  - Top of Door: 9 1/16" [230]
  - Height: 3/4" [19]

**Note:** If user wishes to have a lesser swing angle, simply move hold open stop away from the pivot hinge in increments of 1/2" until desired angle is achieved.
**Installation Instructions**

**TOP JAMB (PULL SIDE) MOUNTING APPLICATION (RIGHT HAND SHOWN) 180° DOOR PREP**

**Installation Sequence:**
1. Use door prep above to locate holes on door and frame. Drill 1/8" pilot holes for the self tapping screws.
2. Fasten closer body to door with power adjustment port towards hinge.
3. Position slide track to frame face orientated with countersink visible open side facing down and with hold open stop end toward hinge edge of door. Slide end caps on, insert screw through end caps and fasten to the frame.
4. Place slide arm on pinion shaft of closer so arm is positioned at a 45 degree angle out from door face.
5. Secure arm with arm washer and arm screw.
6. To properly preload closer, push arm towards door and secure other end of slide arm to track by screwing it to the slide insert. Open door to required opening angle. Then slide stop only/hold open stop up against slide insert and tighten down the stop only/hold open stop via set screw.
7. Determine door width, adjust spring power of closer by referencing closer adjustments on page 4.

**NOTE:** REQUIRES 5917 DROP PLATE WHERE THE HEAD FRAME FACE IS LESS THAN 2-5/8" - REFERENCE PAGE 4 FOR CUSTOM MOUNTING.

---

**PUSH SIDE APPLICATION (RIGHT HAND SHOWN) 120° DOOR PREP**

**Installation Sequence:**
1. Use template to locate holes on door and frame. Drill 1/8" pilot holes for the self tapping screws.
2. Fasten closer body to door with power adjustment nut away from hinge.
3. Position slide track to frame soffit with open side facing down and with hold open stop end toward hinge edge of door. Slide end caps on. Install screw up through end caps and fasten to the frame.
4. Connect slide arm to track by screwing it to the slide insert. DOOR MUST REMAIN IN CLOSED POSITION FOR FOLLOWING ASSEMBLY STEPS.
5. Swing arm toward closer and rest the hub of the arm on top of the closer pinion. Place a wrench on the bottom pinion of the closer and rotate away from the hinge (approx. 30 degrees). When the cutout of the arm hub and the pinion line up, slide the arm hub down over the pinion and secure tightly with the washer and screw. This pretensions the closer arm.
6. Open door to required opening angle. Then slide stop only/hold open stop up against slider insert and tighten down the stop only/hold open stop via set screw.
7. Determine door width, adjust spring power of closer by referencing closer adjustments on page 4.

**NOTE:** IF USER WISHES TO HAVE A LESSER SWING ANGLE, SIMPLY MOVE HOLD OPEN STOP OR STOP ONLY AWAY FROM THE PIVOT HINGE IN INCREMENTS OF 1/2" UNTIL DESIRED ANGLE IS ACHIEVED.
Installation Sequence:
1. Use door prep above to locate holes on door and frame. Drill 1/8" pilot holes for the self tapping screws.
2. Determine door width, adjust spring power of closer by referencing closer adjustments on page 4.
3. Fasten closer body to 5917 plate with power adjustment port away from hinge.
4. Position slide track to door face with open side facing up and with hold open stop end toward hinge edge of door. Slide end caps on, orientated with countersink visible. Insert screw through end caps and fasten to the door.
5. Place slide arm on pinion shaft of closer at preload of 45 degree angle out from door face.
6. Secure arm with arm washer and arm screw.
7. Push arm towards door and secure other end of slide arm to track by screwing it to the slide insert. Open door to required opening angle. Then slide stop only/hold open stop up against slide insert and tighten down the stop only/hold open stop via set screw.

POCKET DOOR APPLICATION 90° OPEN DOOR INTO POCKET

Installation Sequence:
1. Use template above to locate mounting holes on pocket wall and mount closer according to pull side application template. Drill 1/8" pilot holes for the self tapping screws.
2. Determine door width, adjust spring power of closer by referencing closer adjustments on page 4.
3. Fasten closer body to door with power adjustment nut away from hinge.
4. Fasten slide track to door face with open side facing down and with hold open stop end away from hinge edge of door. Slide end caps on, orientated with countersink visible. Screw will go through end caps as it fastens to the frame.
5. Connect slide arm to track by screwing it to the slide insert. DOOR MUST REMAIN IN CLOSED POSITION FOR FOLLOWING ASSEMBLY STEPS.
6. Swing arm toward closer and rest the hub of the arm on top of the closer pinion. Place a wrench on the bottom pinion of the closer and rotate away from the hinge (approx. 30 degrees). When the cutout of the arm hub and the pinion line up, slide the arm hub down over the pinion and secure tightly with the washer and screw. This pretensions the closer arm.
7. Loosen the stop only/hold open stop and open door to required opening angle. Close the door. Now slide the stop only/hold open stop back towards the hinge about 1/2" and tighten down the stop only/hold open stop via set screw.
5300 DOOR CLOSER ADJUSTMENTS

ADJUSTMENTS (USE 5/32" HEX WRENCH FOR THESE ADJUSTMENTS)

**SWEEP SPEED**

Note: Adjust closing time speed to between 3 and 7 seconds from 90° to 0°. Greater closing times may be required for elderly or handicapped.

**LATCH SPEED**

Adjust latch speed so door completely closes and latches.

**BACKCHECK**

Adjust backcheck accordingly to prevent excessive opening speed.

SPRING POWER ADJUST (Sizing in accordance to BHMA/ANSI 156.4)

**TABLE OF SIZES**

Closer is shipped set to size 3. To change the closer size, use a hex wrench to rotate the spring power adjust. Follow the chart to make the correct numbers of 360° turns to set the closer size appropriately for the door application.

The number of turns is an approximation and does not account for environmental or door hardware affects.

(Use 5/32" Hex Wrench for this adjustment)
