1. PREPARE DEVICE FOR DOOR

1) Hand the device to suit the door.
   a. Loosen screw shown in figure 1
   b. Rotate handle to position needed for desired handing
   c. Tighten screw. DO NOT OVERTIGHTEN.

2) Install mounting standoffs and cylinder.
   a. Install the standoffs in the proper hole based off handing and figure 2.
      Note: The standoffs should always be farthest away from the hinge edge of the door.
   b. Install cylinder with the provided screw as shown in figure 2.
   c. Install cylinder housing
   d. Install actuating shaft
2. PREPARE DOOR

1) Using Figures 3, drill required holes for mounting.

![Diagram of hole alignments]

3. INSTALL EXIT DEVICE AND TRIM

1) Install trim standoffs and actuating shaft through door.
2) Insert actuating shaft into cam on back of exit device.
3) Secure with 2 screws provided with trim.
   a) Screws may have to be cut down to fit door thickness.
4) Complete installation as per exit device instructions.
