

Taipei 101 Taipei, Taiwan

ARCHITECT

C.Y. Lee & Partners Architects

GENERAL CONTRACTOR

Samsung Engineering and Construction
KTRT Joint Venture

CUSTOMER

Danterra

Taipei 101 is Taiwan's tallest building and largest engineering project in the country's history. Taipei 101 shoots 508 meters into the sky--with 101 floors above ground and 5 floors below ground. The structure was designed to resemble bamboo, and is a reflection of traditional Chinese building philosophy. The structure inclines 7 degrees inward and increases in size as it gets taller. It contains retail space, office space, and condominiums.

Hager Companies provided a complete assortment of architectural hinges--all of which are American-made and backed by a lifetime warranty. Additionally, Hager provided various trim items, including pulls, door stops, floor stops, and flush bolts.
