Hager’s 3300 Series Grade 3 tubular leverset is field reversible, with a thru-bolt design for ease of installation. This field reversible lock is designed with thru-bolts to make installation quick and simple. The 3300 Series is offered in four functions — Passage, Privacy, Entry, and Single Dummy — with four lever designs — Archer, August, Johnston and Withnell — to provide the perfect solution for suiting with other Grade 1 and Grade 2 products provided by Hager. Vertical markets that may benefit are assisted living facilities as well as multi-family.

• Key markings other than key set
• Core markings (visual or concealed)
• Bitting Lists are available, ordered separately from master keyed order, specify 3998

LFIC Cores (Available in Schlage C Only)

3919
Zero Bitted Core 6-Pin
Includes two key blanks
Finishes include US4 or US26D

Combed Core 6-Pin
Includes two change keys
Finishes include US4 or US26D

LFIC Keys

3956
Key Blank
Schlage C Keyway, 6-pin only

3962

LFIC Mortise Cylinder Housing

3902 Mortise Cylinder
- 2-639-7082 standard cam;
  2-639-7083 Adams Rite Cam shipped loose in the box.
- Thread size is 1.150” x 32 UNS.
- Cylinder face diameter is 1.360”.
- Large Format Interchangeable
  Core housing supplied less core
- **Must specify cam, 1-1/2” length**

LFIC Mortise Cylinder Cams

2-639-7570 Standard Yale Cam

2-639-7571 Adams Rite Cam

2-639-7572 Schlage “L” Cam
  For use with Hager mortise locks (all functions)

2-639-7573 Corbin Cam

2-639-7574 Sargent/Yale Cam
Keying Options

Keyed function locks are supplied keyed different unless otherwise specified.
• Keyed alike, 0 bitted, 1 bitted
• Master keyed (must specify quantity of Master keys where applicable)
• Construction master keyed
• Keyed to specific or existing number
• Submit master keying form (page 86)
• Extra cut keys (3908 - Cut 7-pin)
• Key markings: 1AA, 2AA etc. (per key)
• Key markings other than key set (per key)
• Cylinder markings (visual or concealed)
• Do not duplicate standard
• Bitting lists are available, ordered separately from Master keyed order, specify 3998

Notes:
• Keys are cut bow to tip
• Must purchase capping block/press and key punch due to 140 pin spacing

Hager Keyway (Conventional Cylinders)

Hager H1
Hager H2
Hager H3

Rim Cylinders

3901 Rim Cylinder
• 140 Pin spacing
• Conventional cylinder supplied 7-pin only
• Furnished with trim ring, mounting plate, and break off screws
• Long tail piece standard
• Supplied with two operating keys

Mortise Cylinders

3902 Mortise Cylinder
• 140 Pin spacing
• Conventional cylinder supplied 7-pin only
• 3975 standard cam attached and 3972 Adams Rite cam shipped loose in the box
• Thread size is 1.150” x 32 UNS
• Cylinder face diameter is 1.360”
• Supplied with two operating keys
• 1-1/8” (29 mm) standard length, 1-1/4” (31 mm) available, 1-5/8” (41 mm) for mortise exit devices
• Must specify length, cam, keyway, and keying requirements

Cylinders

3906 Key-in Lever/Deadlock Cylinder
• 140 Pin spacing
• Includes two operating keys
• Specify Hager keyway, tailpiece, and keying requirements

Note: Cylinder instructions and ordering guide available online.

Keys

3907 Key Blank
Hager keyways (H1, H2, H3, H12, H23, H123)

3908 Cut Key
• Hager keyways (H1, H2, H3, H12, H23, H123)
• Specify keying required (masterkey, construction masterkey, control key)
Keying Options
Cores are furnished keyed different unless otherwise specified. Other keying options include:
- Keyed alike
- Master keyed (must specify quantity of master keys, control keys or additional change keys)
- Keyed to specific or existing number
- Key markings: 1AA, 2AA etc. (per key) - VKC
- Key markings other than key set
- Core markings (visual or concealed)
- Do not duplicate standard
- Bitting lists are available, ordered separately from master keyed order, specify 3998
* Construction master keyed not available.
Notes:
- Keys are cut bow to tip
- Must purchase capping block/press and key punch due to 140 pin spacing

Keyways (Hager) - H1, H2 and H3 SFIC Cores

3969
Combined Core 7-Pin
- Includes two change keys
- Finishes include US4 or US26D
- 140 Pin spacing

3909
Uncombined Core 7-Pin
- Includes two key blanks
- Finishes include US4 or US26D
- 140 Pin spacing

SFIC Keys

3907
SFIC Key Blank
Hager keyways (H1, H2, H3, H12, H23, H123)

2 LEVEL SYSTEMS
Simple Master Key System

The master key symbol consists of TWO letters, AA. The change key numbers are added to the master key letters. The numbers come FIRST for a simple master key system, example: 1AA, 2AA, 3AA, etc.

3 LEVEL SYSTEMS
Grand Master Key System

The grand master key set symbol is assigned ONE letter, starting with A. The master key set symbols under this grand are assigned TWO letters, the first of which will be the same as the grand; AA, AB, AC, etc. are all masters under the grand A. (Caution: Do not use the letters, I, O, Q or X because of the possible confusion with the numbers 1 & O. X is reserved for identifying cross keying.) Change key numbers come AFTER the letters, example: AA1, AA2, AA3, etc.

For master key set symbols beyond AZ, insert a number between the letters to designate which pass through the alphabet they represent. A2A through A2Z represent the second pass through the alphabet of masters under the Grand A. A3A through A3Z would be the third pass through the alphabet. Change keys under these masters have the numbers suffixed in the usual way A2A1, A2A2, A2A3, etc.

If a cylinder is to be operated by its change key and the GMK only (No master), the change number is added to the GMK symbol. This is illustrated by the key set symbol A1 in the schematic shown.

4 LEVEL SYSTEMS
Great Grand Master Key System

The great grand master is assigned the key set symbol GGM. The rest of the symbols are the same as those in a 3 level system.

The grand master keys under the GGM are assigned the key set symbol of single letters of the alphabet A, B, C, D, etc., starting with A. The master key set symbols under this grand are assigned TWO letters, the first of which will be the same as the grand; AA, AB, ..., BA, BB, ..., CA, CB, ..., etc. (Caution: Do not use the letters, I, O, Q or X because of the possible confusion with the numbers 1 & O. X is reserved for identifying cross keying.) Change key numbers come AFTER the letters, example: AA1, AA2, AA3, etc.

For masters beyond AZ, insert a number between the letters to designate which pass through the alphabet they represent. A2A through A2Z represent the second pass through the alphabet of masters under the Grand A. A3A through A3Z would be the third pass through the alphabet. Change keys under these masters have the numbers suffixed in the usual way A2A1, A2A2, A2A3, etc.

If a cylinder is to be operated by its change key and the GGM only (No grandmaster, no master), the change number is added to the GGM key set symbol. This is illustrated by the key set symbol GGM1 in the schematic shown.
SINGLE KEYED DIFFERENT (SKD) (Example: Narcotics Room, Pharmacies)
When requirements are such that no other key operates the cylinder (master, other change keys, etc.) they are referred to as
“single keyed different” and given the keyset symbol SKD. When more than one SKD is required in a facility, they are numbered
SKD1, SKD2, SKD3, etc.

NO MASTER KEY (NMK)
When keying requirements are such that all higher levels of master keys do not operate the cylinder, the suffix (NMK) is added
to the keyset symbol. For example, AA1 (NMK) is operated by the change key AA1 only. Neither the A grand, nor the AA master
operate the cylinder. A keyset symbol, AA (NMK) indicates the cylinder to be operated by the AA master only, the A grand does
not operate the cylinder.

SELECTIVE MASTER KEYS
It is often useful in large keying systems to issue a high
level master key to maintenance personnel which allows
access across all master and grand master key boundaries
of a keying system.

To designate that a lock be operated by a selective
master key, suffix the symbol in parentheses to the
standard symbol. Example: AA1 (ENG). This must be
added every time the selective key is to operate and left
off whenever the selective key is NOT to operate. For
instance, you may lay out a system in which key AA1 is
to operate two different offices. Inside one of them is an
electrical cabinet which must be accessible to maintenance personnel carrying the ENG key. That lock must be specified as AA1
(ENG), while the lock for the other office must be specified as AA1.

Selective master key is a convenience feature which decreases the security of the cylinders it operates and limits the expansion
and flexibility of the overall keying system. Each selective master key typically eliminates 20-25% of the capacity of the system
where it is used, so it should only be specified when absolutely required. It is recommended that no more than one system-wide
selective master key be used within the same system.

CROSS KEYING
Like selective master keying, cross keying is a convenience feature and will limit the expansion and flexibility of the overall key
system. Whenever two or more different change keys such as AA1 and AA2 are both required to operate the same cylinder, the
cylinder’s security is reduced. This is called cross keying. When the cross keying occurs under all the same higher levels (MK, GMK,
GGMK), such as AA1 and AA2, it is known as controlled cross keying. When you combine keys under different higher levels
(MK, GMK, GGMK), such as AA1 and AB1, it is known as uncontrolled cross keying, which you NEVER want to do.

Convenience may reduce cylinder security and hinder the overall key system expansion. Cross keying usually imposes limits on
the flexibility and expansion of the overall keying system. This is especially true of uncontrolled cross keying. For these reasons, it
is strongly recommended to allow personnel to carry more than one key. Cross keying should be discouraged whenever possible.
However, when cross keying is required, it is specified as follows, and should be summarized at the beginning of each order. It
cannot normally be added later. Each cross keyed set should also be limited to keys which are all under the same higher level
master keys. Prefix the keyset symbol with the letter X (example: XAA3). All keys which are to operate the cylinder are to be
listed following the keyset symbol with the phrase “to be operated by” (“TBOB”, “OB”, “operated by” are also common phrases/
abbreviations used. Example: XAA3, operated by AA1, AA2, AA, and A. Note that X is a cylinder designation only. The change
keyset would be AA3.

NOTE: HAGER WILL NOT DO UNCONTROLLED CROSS KEYING DUE TO THE REDUCED SECURITY IT CAUSES.
CONSTRUCTION MASTER KEYING

Hager uses the lost ball method for construction keying for conventional cylinders. If you have ordered Small Format Interchangeable Core (SFIC), you will be able to order temporary cores (Blue & Red are stock). Permanent cores will be shipped with permanent keys.

Recommendation:

Use as many keyed alike groups to conserve bitting combinations. Study blueprints and/or master plans for campuses to identify areas where more than one door leads into the same space, and where several different areas are used by the same personnel. These areas should be keyed alike (use the same keyset symbol). This conserves key bitting combinations for future use as well as reduces the need to issue master keys. Remember, key system are much like a rubber band, it only stretches so far. You can stretch is horizontally to create more master keys, or vertically to create more changes under each master, but there is a finite number of combinations available.

Case #1 (Cross Keying)
Cylinder requires its own change key. The illustration depicts part of a small medical building where two doctors share a common receptionist. The receptionist gets the AA3 change key. Each doctor carries a key which operates only one office, but also operates the entrance from the corridor, by cross keying that cylinder to include the following keys to operate it. XAA3, TBOB (To Be Operated By) AA1, AA2, AA and A.

Case #2
The hall door cylinder does not require its own change key. This illustration depicts a section of a floor in a dormitory. Each student’s bedroom change key operates the hall door cylinder. There is no need to construct a change key which operates only the hall door.

In this case, place an X at both the beginning and the end of the keyset symbol and a number between them. Example: X1X, X2X, etc. Again, always include the "TBOB" (to be operated by) phrase with a complete listing of the keyset symbols to operate the cylinder.
