User Experience Benefits

There is a multitude of benefits that extends throughout the process from the ease of ordering and system design to updating user access rights.

Architect:
The HS4 system provides the building owner and administrator the benefits of a traditional wired access control solution but at a fraction of the cost. There are no wires to run or a checklist of products to get power to and from the lock.

Installer:
Wireless means quicker and easier installation. It also means fewer callbacks.
Fits any door – new construction and retrofit applications are quick and easy to install and with a wide range of products, the HS4 system has a solution for almost every door and application.

Owner & Administrator:
Effective and time-saving management of all online, offline and wireless access points and applications in one software package.

Different applications apart from doors can be included, including elevators, letter boxes, lockers, machinery or waste containers.

Software structured around users and doors, easy navigation, user-friendly management of user groups, multi-station functionality (web-based), multi-site functionality (Partitions).

Open architecture and standardized interfaces allow seamless integration with various video, alarm, security & building management systems.

Multi-application allows one credential to be used for secure and efficient processing, issuing, encoding and validating of different applications including access control, cashless vending and T&A.

Update the access plan quickly, easily and securely.

Multiple opening modes to customize each door and to allow a specific set of access rights to each user:

- Standard – door is always locked from the outside with free egress from the inside
- Office Mode – door can be unlocked from the outside by the user
- Timed Office Mode – door can be unlocked at specific times and lock automatically on a schedule (times, days of the week, holiday and weekends, etc.)
- Automatic Open – door can be unlocked based on a specific schedule
- Toggle – user presents their card to unlock the door and presents it again to lock the door from the outside (timed toggle can be set to prevent this function on a specific schedule)
- Keypad – locks with a keypad can be set to work with a keypad PIN entry only, keypad PIN + Card, or card only and can be programmed to a schedule
