

**One Family.
One Brand.
One Vision.™**

One Key.

Hager Companies is proud to introduce a new keyway designed to help you optimize performance in your rim, mortise, key-in-lever/knob, Small Format Interchangeable Cores and profile cylinders. Our new keyway supports the Hager philosophy of, "One Family, One Brand, One Vision," and now...One Key!

With one single 7-pin key, **NOW** conventional cylinders, Small Format Interchangeable Cores, and even European profile cylinders are all supported within the **SAME** keying system providing added security and system performance.

Some key benefits include:

Ability to offer conventional cylinders and SFIC in the same keying system.

Improved security, greater flexibility and ease of support because of the 7-pin cylinder key systems.

Hager keys can be cut with most popular key machines on the market with an available keypunch from the factory.

Opportunities to provide larger master key systems in fewer keyways.

Aftermarket business with retrofit opportunities.

Easy to use and order with no forms or restrictions for Hager distributors.

Tools and training are available online at hagerco.com.
