

# SCHOOL SAFETY + SECURITY

Safety has been a passion of Hager for over 169 years. Providing door hardware that meets current building codes is essential in all buildings but especially in schools, where the safety and security of our children are paramount.

When we introduced our new electronic access control line, HS4, last year one of our goals was to provide different levels of security and safety that would fit a range of budgets. There isn't a one-size-fits-all solution. One of the benefits of the HS4 product line is its ability to diversely secure an existing or new education facility and expand with future growth.

The HS4 product line can initiate a lockdown process that is system-wide with a push of a button; or just the perimeter; or maybe a specific building or cross corridors. Our team can assist in determining which process is right for your facility.

On the back of this sheet, you'll find details on four levels of possible systems. These can be changed accordingly to the end user needs.

For additional information on our HS4 electronic access control products or other products, please contact your local sales representative, our HS4 team at [accesscontrol@hagerco.com](mailto:accesscontrol@hagerco.com) or visit [hageraccesscontrol.com](http://hageraccesscontrol.com).
