**Installation Made Easy**

For the convenience of our customers, Hager Companies introduced several key features to the exit device market:

- Thru-bolts are included with every model. Wood and machine screws are also provided standard in every package.
- Slotted strikes speed up installation, allowing the installer to make easy adjustments to align the latch to the strike.
- Non-handed device offers added versatility and means less inventory.
- Escutcheon trim has the locking mechanism built inside which reduces door preparation and installation time by requiring fewer holes in the door.

**Shim Kits**

Shim kits are available for devices on doors with glass bead kits or other interfacing moldings. Each kit contains two 1/8” (3.2 mm) shims and the appropriate longer fasteners.

**Dogging**

Cylinder dogging or less dogging are available to replace the standard hex key dogging on panic exit devices. For cylinder dogging, specify CD on order or purchase 4926 for retrofit applications. Unit requires 1-1/8” mortise cylinder (part number 3902) with standard cam. For less dogging, specify LD on order.

**Sizing**

The exit device is cut for 36” (914 mm) and 48” (1219 mm) wide doors. For other door widths, cut exit device to appropriate length. Recommended overall length of exit device is equal to the door width minus four inches. The surface vertical rod devices are supplied for an 84” (2134 mm) opening standard, but can be ordered for a 96” (2438 mm) opening. Extension rods are available to accommodate openings taller than 96” (2438 mm) and up to 120” (3048 mm).

**4600 SERIES - GENERAL INFORMATION**

**Installation Made Easy**
For the convenience of our customers, Hager Companies introduced several key features to the exit device market.

- Thru-bolts are included with every model. Wood and machine screws are also provided standard in every package.
- Slotted RIM strikes speed up installation, allowing the installer to make easy adjustments to align the latch to door dimensions.
- Non-handed device offers added versatility and means less inventory.
- Escutcheon trim has the locking mechanism built inside which reduces door preparation and installation time by requiring fewer holes in the door.

**Shim Kits (Rim only)**
Shim kits are available for devices on doors with glass bead kits or other interfacing moldings. Each kit contains two 1/8” (3.2 mm) shims and the appropriate longer fasteners.

**Dogging**
Cylinder dogging or less dogging are available to replace the standard hex key dogging on panic exit devices. For less dogging, specify LD on order. For cylinder dogging, specify CD on order or purchase 4926 for retrofit applications. Unit requires 1-1/8” (29 mm) mortise cylinder (part number 3902) with standard cam.

**Sizing**
The exit device is cut for 36” (914 mm) and 48” (1219 mm) wide doors. For other door widths, cut exit device to appropriate length. Recommended overall length of exit device is equal to the door width minus four inches.

Installation Made Easy
For the convenience of our customers, Hager Companies introduced several key features to the exit device market.

- Thru-bolts are included with every model. Wood and machine screws are also provided standard in every package.
- Slotted strikes speed up installation, allowing the installer to make easy adjustments to align the latch to the strike.
- Escutcheon trim has the locking mechanism built inside which reduces door preparation and installation time by requiring few holes in the door.

Shim Kits
Shim kits are available for devices on doors with glass bead kits or other interfacing moldings. Each kit contains two 1/8” (3.2 mm) shims and the appropriate longer fasteners.

Sizing
The exit device is cut for 36” (914 mm) and 48” (1219 mm) wide doors. For other door widths, cut exit device to appropriate length. Recommended overall length of exit device is equal to the door width minus four inches. The surface vertical rod devices are supplied for an 84” (2134 mm) opening standard, but can be ordered for a 96” (2438 mm) opening. Extension rods are available to accommodate openings taller than 96” (2438 mm) up to 120” (3048 mm).
